ACMVIT - Core Member

March 2022 - Present

- Took part in the internal ideathon event

Projects

nyx Interpreter

September 2020

nyx is a simple, deterministic programming language implemented in C++. It contains features such as classes, lists, tuples, a static type system, and copy, reference and move semantics.

<https://github.com/dc03/nyx>

BitArray Library

March 2021

BitArray is a tiny header-only C++ library for implementing a generic bit array that works with multiple integer types. It was created to practice working with the Doxygen and Sphinx documentation generation systems.

<https://github.com/dc03/BitArray>

rispy Interpreter

February 2022

rispy is a small lisp interpreter for a dialect of lisp inspired by lispy. It was created to practice the Rust programming language.

<https://github.com/dc03/rispy>

mini-utf8 Library

February 2022

mini-utf8 is a tiny C library for encoding and decoding UTF-8 strings. It was created to learn about how UTF-8 encoding works.

<https://github.com/dc03/mini-utf8>
